Professional Summary

AI/ML enthusiast with a strong foundation in Python, Machine Learning, Deep Learning, and problem-solving. Hands-on experience developing AI-powered applications, including Retrieval-Augmented Generation (RAG) systems, computer vision, and gesture-based automation projects using Python, OpenCV, MediaPipe, and Large Language Models (LLMs). Skilled in building practical AI solutions and applying Machine Learning techniques to solve real-world problems.

Education

Kakinada Institute of Engineering and Technology

2022 – 2026

B.Tech – Computer Science Data Science CGPA: 7.5 / 10.0

Skills & Technologies

Core: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL, Excel, Power BI, FastAPI

Machine Learning: Regression, Classification, Feature Engineering, EDA, Model Evaluation, Tuning

Advanced AI/Computer Vision: Deep Learning, YOLOv8, OpenCV, Natural Language Processing

Tools: Jupyter Notebook, Git, GitHub, Visual Studio Code, Databricks

Other: Statistics, Data Preprocessing, Data Visualization, Real-time Processing, Agile Methodology

Projects

AI Document Search

[GitHub Repository](#)

- Developed an AI-powered document search system to retrieve relevant information from uploaded documents.
- Implemented document processing, text extraction, and semantic search capabilities using Python.
- Built a FastAPI backend to handle document uploads, processing, and search requests.
- Applied AI and machine learning techniques to improve document retrieval and user experience.

ThreatVision - Real-Time AI Surveillance & Anomaly Detection

[GitHub Repository](#)

- Built a real-time multi-object detection and tracking pipeline with persistent IDs.
- Implemented rule-based anomaly detection (loitering, abnormal speed) with alerts and CSV logging.
- Supported modular inputs (webcam, MP4, RTSP) with live visualization (bounding boxes, FPS, counts).
- Developed a scalable surveillance pipeline designed for continuous real-time monitoring and event analysis.

Gesture-Control-PC - Hand Gesture-Based Desktop Automation

[GitHub Repository](#)

- Built a real-time hand gesture-based desktop automation system using computer vision and MediaPipe hand tracking.
- Implemented gesture recognition for cursor movement, left/right click, scrolling, volume control, and window navigation.
- Integrated OpenCV, MediaPipe, and PyAutoGUI to enable touchless human-computer interaction with low-latency performance.
- Designed an intuitive touchless control workflow that converts hand movements into real-time desktop actions.

Experience

Data Science & ML Contributor – Global Coding Club, KIET

Mar 2024 – Mar 2025

- Collaborated on data analysis and machine learning projects using Python, Pandas, NumPy, and Scikit-learn.
- Performed data cleaning, exploratory data analysis (EDA), and visualization to extract actionable insights.
- Built and evaluated classification and regression models with a focus on model performance and documentation.
- Collaborated using Git and GitHub, following version control best practices in team-based project development.

Certifications & Achievements

- Foundations of Modern Machine Learning — IIIT Hyderabad
- Python Certificate — Edyst
- Data Analyst – OneRoadmap
